

## CYNDRICAL SILO

Cyndrical silos are intended for short-term storage of grain and the dispatch of dry bulk non-abrasive materials. The silo is intended for assembly into technological units of animal feed mixtures and similar industrial operations, consisting of material storage facilities and subsequent technological equipment for the processing of loose materials.

Silos are designed for indoor and outdoor use. The volume (capacity) of the stored material can be selected according to customer requirements. It is possible to produce containers with a conical hopper or a flat bottom and a hopper for storage of wood mass.

Type	-	galvanized/normal steel/ stainless steel
Diameter	-	960, 1200, 1590, 1910, 2500 mm
Capacity	-	1 m <sup>3</sup> – 30 m <sup>3</sup>
Type of emptying	-	hopper/flat bottom (recovery equipment)

Accessories: dump hat, check holes, ladder, bracing, screw conveyor, etc.
