TAURUS, s.r.o., Chrudim was founded in 1992. Initially, the production programme involved vertical mills for treating grains in feed mixture plants. Over time, the company extended its range with additional machines that enabled completion of integrated lines for producing compound feed. This particularly involved mixing machines, screw conveyors, bulk feed storage bins, tensometric scales and magnetic separators.

The company specialises in the provision of full-extent compound feed plants (i.e. bulk/pelleted/extruded mixtures) as well as lines for post-harvest treatment of cereals including storage and shipping. These are turnkey lines and include everything from the manufacture and assembly of the machinery through automated controls up to operator training. In addition to these two major sectors, the company is also active in the field of breweries, distilleries, rendering plants, grain mills and biomass-processing energy plants.

Production programme

- Vertical and self-sucking grinders
- Screw conveyors, bucket elevators
- Chain conveyors - redlers
- Feed mixing machines with the mixability of 1:100,000
- Shipping and storage bins, grain silos
- Grain sorters and cleaners
- Elements of downpipes, flaps & slide gates
- Tensometric scales
- Waste wood/biomass crushing machines
- Rendered meat meal: crushers and sifters
- Augers, thin-walled tubes, perforated plates

Technology

- Full-extent compound feed mixing plants
- Small and mobile lines for feed plants
- Post-harvest cereal treatment lines
- Refurbishment of existing operations
- Biomass grinder and pellet lines
- Brewery malt storage and grinding
- Processing meal in rendering plants
- Pelleting lines
